

Pressure points

Your feet are your stable foundation and connection to the earth. There is a balance between giving and receiving, with some muscles lifting the three arches, while the three pressure points of your feet ground down. About two-thirds of your weight rests on your heels, stacking your bones.

Foot arches

The Romans built bridges in arches knowing this elegant structure would stand the test of time. Your feet are just as structurally sound, with three overlapping arches creating a stable yet resilient tripod base. To activate your arches, lift your toes, pressing evenly into these three pressure points. Release your toes, maintaining a lifting energy.
