

An X-ray image of a human torso, specifically the chest and upper abdomen area. A pacemaker is visible, implanted under the skin just below the collar bone. The pacemaker has a main body with a battery and a computer, and several thin wires (leads) extending from it. One lead is visible on the left side of the image, and another is visible on the right side. The background shows the ribs and internal organs in a grayscale X-ray style.

Beneath the skin

This X-ray image reveals a pacemaker placed under the skin, just below the collar bone. The main body of the pacemaker contains the battery and the computer. Small wires connect it to the heart.
