

A large, geodesic dome structure made of a complex network of dark metal beams and translucent panels. The interior is filled with lush green tropical plants, including tall palm trees and various ferns. A dirt path winds through the center, where several people are walking. In the foreground, there is a pond with several large, round lily pads. The sky is visible through the translucent panels of the dome.

At 170,000 sq ft (16,000 sq m) in size, the Rainforest Biome is the world's largest indoor rainforest.

BIOME BUBBLES

The bubble-shaped greenhouses at the Eden Project sit in a giant clay pit. They are made of reinforced steel, covered with an extremely light but strong plastic that allows the light in but traps heat and moisture. Most of the construction was done using sustainably-sourced or recycled materials.
