

Steve Jobs & Steve Wozniak

The guys who gave us HOME COMPUTERS

Once upon a time, personal computers had to be put together from a kit and could be used only by highly skilled super-geeks. Apple changed all this.

The two Steves

Both Californians, Steve Wozniak was born in 1950 in Sunnyvale, and loved tinkering with electronics. Steve Jobs was born in San Francisco, in 1955 and grew up in the area that would become **Silicon Valley**. The pair first met when Jobs got a summer job at Hewlett Packard where Wozniak was also working. In 1976, they both quit their jobs to create "**APPLE**." Their goal was to create *a cheap computer that was easy to use*.

The iPad is a touch-screen computer that lets you browse the Internet, watch movies, play games, and read e-books.

By the way...
I sold my Volkswagen van and Woz sold his prized scientific calculator so that we had enough money to build the Apple I.

They couldn't have done it without...

The first "computer" was built by **CHARLES BABBAGE** (1791–1871) in the 1820s. His "Difference Engine" was a machine that performed **MATHEMATICAL CALCULATIONS**.

Binary code is a sort of computer language that uses the digits 0 and 1 to represent data. The letter "i" in binary is 01101001.

ALAN TURING (1912–1954) designed the **FIRST MODERN COMPUTER** to use binary code and magnetic tape to store data in 1936.
