

Ursula's Bath Bombs

Create your own bath bombs that will bubble and fizz in your tub, just like one of Ursula's potions! But don't worry: they don't release magic, just fizz, fragrance and relaxation!

You will need:

- Two mixing bowls
- 80 g (1/2 cup) cream of tartar
- 360 g (2 cups) baking soda
- 15–25 drops of essential oil
- 10–15 drops of soap dye or food colouring
- A tiny bit of water
- Spray bottle
- Gloves (optional)
- Moulds or muffin pan
- Sifter
- 1 tbsp of carrier oil such as olive or apricot oil (optional, for moisturizing)
- Cling film

Prepare your potions

You don't need ingredients from the bottom of the sea for your potion, just common household items. These measurements will make a batch of bath bombs.

Use ingredients that are gentle to your skin. Avoid contact with your face and eyes.

1 Combine the cream of tartar and baking soda in a mixing bowl. You might want to wear gloves when handling any ingredients.

2 Sift the powders back and forth between two bowls to mix them thoroughly.

For moisture as well as fizz, add carrier oil at this stage.

5 Quickly mix the potion with your hands before it has a chance to fizz. As you mix, spray in water, a tiny bit at a time. Break up any lumps.

6 Continue until the mixture just holds its shape when squeezed, but is still a little crumbly.

Essential oil

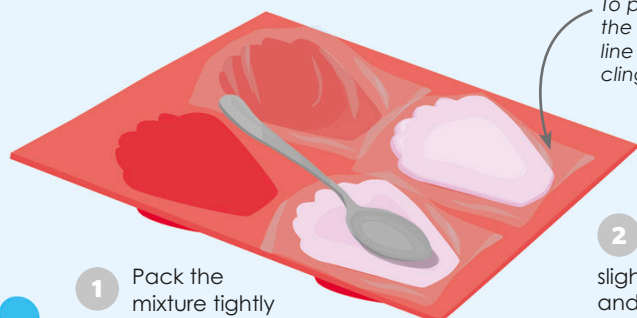

Carrier oil
Soap dye or food colouring

3 Add 15–25 drops of essential oil (depending on the strength of the blend).

4 Add 10–15 drops of soap dye or food colouring (depending on the shade of colour you want).

Get moulding

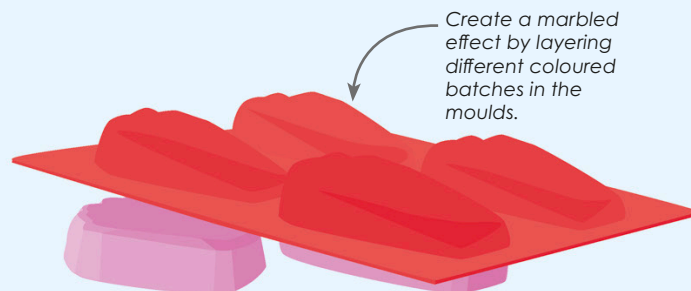

Novelty moulds give you interesting-shaped bath bombs, but you could use a muffin pan for simpler shapes.

To protect the mould, line it with cling film first.

1 Pack the mixture tightly into your moulds.

2 If you're using a two-part mould, slightly overfill each half and press them together tightly, without twisting.

Create a marbled effect by layering different coloured batches in the moulds.

3 Let your bath bombs dry for a couple of hours in a warm, dry place. Keep them out of direct sunlight.

4 Once the bath bombs are dry, carefully push them out of the mould – then they are ready for bathtime!
