

CINDERELLA

Fairy-Tale Castle

Use mathematical magic to transform cardstock into a spectacular castle! Flat shapes called nets fold up to become 3D blocks for building your own fairy-tale structure.

You will need:

- Tracing paper
- Pencil
- Coloured cardstock
- Scissors
- Ruler
- White glue or glue stick

Make the building blocks

The first step is to turn flat cardstock into shapes that you can build with. For a construction like this, you will need 18 hexagonal prisms, 11 hexagonal pyramids and 7 cuboids.

1 Trace the net templates on pages 60–61.

2 Copy the nets onto your chosen colour of cardstock and cut them out.

3 Ask an adult to score along all the fold lines using a ruler and scissors.

4 Fold each scored line over. To get a neat edge, run a ruler along the fold.

5 Glue the tabs to the inside of the main body of all the nets to make your 3D shapes.

DID YOU KNOW?

Cinderella's castle inspired the castles at Walt Disney World's Magic Kingdom in Florida, USA and at Tokyo Disneyland in Japan.

This tower is made from stacked cuboids.
