

The tallest tower has a gold roof.

Construct your castle

Once you have all your blocks, you can stack and glue them together to make towers and the outer wall, and bring your castle to life.

- 1 Stack prisms or cuboids to make castle towers. Top them all with pyramids and glue them together.

You can vary the height of your towers.

- 2 Glue pyramids on prisms for the low outer-wall towers.

- 3 Cut out crenelated strips of gold cardstock.

- 4 Glue the strips around the top of each tower and along the cuboid wall pieces.

Lay the cuboids lengthwise.

- 5 Glue the wall together, starting with a low tower, then alternating cuboids and towers.

- 6 Cut out a black semicircle of cardstock and glue it to the central wall for an archway.

- 7 Arrange the towers behind the wall.
