

Will o' the Wisps

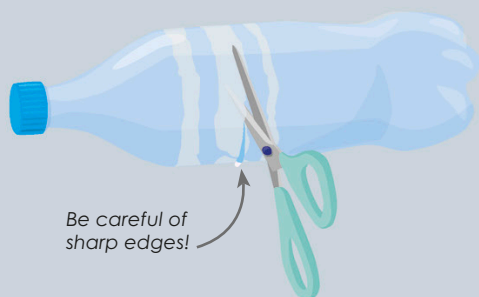

Tiny, glowing creatures named will o' the wisps guide Princess Merida through the dark hills of the Scottish Highlands. You can create the same floating light effect with glow sticks. Where will your wisps lead you?

Make your own wisps

You can prepare the bottles in advance and then add the glow sticks just before you want the wisps to glow in the dark.

You will need:

- Plastic bottles
- Scissors
- Cotton balls
- White glue
- Blue glow sticks

- 1 Ask an adult to cut the top off the plastic bottle with scissors. One bottle will create one wisp.

Varying the thickness of cotton balls gives different shades of blue light.

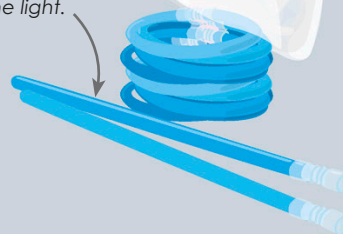

- 3 Glue the pieces of cotton balls all around the outside of the bottle with white glue. Leave to dry.

- 2 Gently fluff and stretch pieces of cotton balls to make different shapes and thicknesses.

Several glow sticks in one bottle will strengthen the light.

- 5 Crack glow sticks and put them in the bottle. Turn off the lights to watch your wisps glow. An average glow stick will last for one hour.

- 4 Once the glue is dry, you can tease the cotton balls into different shapes to give the wisps character.
