

Chess

Chess is a hugely popular **strategy** game that gets your brain planning moves and thinking ahead. It is played on a checkered board with 64 squares.

How to win

Each player has **16 pieces**: one king, one queen, two bishops, two knights, two rooks (castles), and eight pawns. The aim is to take your opponent's pieces and **checkmate** your opponent's king by trapping it where it can't move without being taken.

Rooks can travel any distance in a straight line.
