

Olympic archery

Archery became an Olympic sport in **1900** but wasn't a permanent one until 1972. **South Korea** has been the most successful nation, picking up 23 gold medals over the years.

South Korea's Kim Soo-Nyung is the most successful archer in Olympic history. She has won four gold medals.

Arrow

The type of bow used at the Olympics is called a "recurve bow." It's based on a design that is 3,500 years old!

Arm guard

Recurve bow

Hitting the target

Archers aim their arrows at a target with **10 rings**. Hitting the center circle—the "**bull's-eye**" is worth **10 points**. Every ring farther away from the bull's-eye is worth **one less point**.
