

Wyvern

Wyverns appear in stories from Italy, across Europe, and Africa. The largest forms of Wyvern prey on elephants, rhinos, and other large animals. While some are relatively small, others are among the biggest and most powerful of the Earth-dwelling dragons.

APPEARANCE

The colossal Wyvern has two legs, large wings, and a looped or arrow-shaped barbed tail.

DWELLING

Wyverns make nests in the sides of mountains to lay their eggs. This is the only time they will stay in

one place for long.

The rest of the time they are constantly on the move in search of prey.

POWERS AND TRAITS

- Ferocious teeth and claws
- Its tail can contain a powerful venom.
- Skilled at ambushing prey
