

Dragon jewels

Painite

Painite is the rarest mineral of all. It's so rare, that for many years, only two crystals were known to exist.

Alexandrite

The exceptionally rare alexandrite gem changes color from blue-green in daylight to a ruby red in evening light.

Poudretteite

Tiny crystals of poudretteite were first discovered in the 1960s in Canada. Poudretteite is one of the rarest gems known today.

Red beryl

This exceptionally rare stone is part of a family of gemstones that also includes emerald and aquamarine.
