

Living dragons

Lots of living creatures have a similarity to dragons in some way, whether it's fangs, flight, or ferocious looks.

Many have the word dragon as part of their name.

Black dragonfish

The extraordinary black dragonfish is a ferocious deep-sea creature that is capable of producing its own light. This chemical process is called bioluminescence.

Pink dragon millipede

These strange looking millipedes earned the name of dragon due to their spiky spines and bright colors.

Snapdragon

Snapdragon plants have flowers that look like a dragon's head. If you squeeze the sides of the flower, the top and bottom parts open and close like a dragon's snapping mouth.

Blue dragon sea slug

These beautiful ocean dwellers eat the stinging cells from Portuguese man-o-wars and turn it into a sting of their own.
