

Flying dragon

Using a winglike structure supported by their ribs, flying dragons can glide for long distances.

Dragontail butterfly

At 1.5 in (4cm) long, the tail of the dragontail butterfly is almost as long as its wings are wide.

Sea dragon

Sea dragons can be found off the coast of Australia. The males carry their babies in a special pouch by their tails.

Komodo dragon

The largest living lizard on earth, the komodo dragon uses venom to weaken its prey. It has been known to eat prey as large as a water buffalo.
