

I'll add color to your life

I'll never cease to surprise you and put a smile on your face as I flower repeatedly. My blooms are so very bright and colorful, and their brilliance is only enhanced by the contrast with my waxy emerald-green leaves.

Keep me flowering

To help me reflower, cut off my spent flowers as soon as they have died to encourage new shoots. It's possible to keep me in flower all year if you can give me 12 hours of total darkness daily in late spring and summer, since I flower in the wild when the days are shorter.

Get to know me

As a succulent, I can tolerate being a little dry because I store water in my leaves. This makes me very easy to look after, so I'm a great plant for beginners or teenagers.

Let's make babies

You can propagate me easily by taking leaf cuttings and potting them straight up or rooting them in water first, which takes around two weeks. To ensure good drainage, use a cactus potting mix or an all-purpose compost with added sand.

BE AWARE: I am harmful if eaten, so keep me away from children and pets.
