

You can train me

If you would like to keep me as a tall plant, you can train me to grow onto a moss pole. However, if you would prefer me to trail, either plant me in a hanging basket or position me on top of a tall cupboard or table so I can cascade down.

Let's make babies

I am easily propagated by taking stem cuttings with a few nodules on them. Place these in water until roots appear from the nodules. Then the cuttings can be planted up in a well-drained potting mix.

I like a vacation

I will enjoy a trip to the garden during the summer months, though sit me in a shaded spot. Unlike many houseplants, I can tolerate the change between indoors and outdoors relatively stress-free.

BE AWARE: I am harmful if eaten, so keep me away from young children and pets.
