

### Give me a trim

I am a fast-growing plant, so I can become a little bit leggy. If I do become overgrown, I can be pruned back to give me a denser, healthier appearance. Once any weak stems are cut back to 2¾–4in (7–10cm), it will encourage new growth to appear in spring.

*My compact flowers appear on clustered spikes*

### Let's make babies

I am an easy plant to take cuttings from. Just cut around 5½in (14cm) of a woody stem and insert it into an all-purpose houseplant compost where it will root. It's best to remove all of my old leaves since I will produce new ones, but remember not to plant me upside down.

**BE AWARE:** My sap can be harmful, so keep me away from children and pets.
