

PEACE LILY

Spathiphyllum

As its name suggests, the peace lily is full of positive, tranquil energy to cheer and relax you. It is a regular flowerer, easy to keep, and excellent at cleansing the air. The beautiful contrast between the deep glossy foliage and the white bracts will add a sophisticated and chic feeling to your room.

“I will encourage repose
and cleanse the air.”

Help me thrive

POSITION

Loves warm, humid conditions out of direct sunlight so will grow well in shady corners if kept at 60°F (15°C) or above.

POTTING

Repot annually into the next size up if roots are growing through the bottom of the pot or circling inside. Best grown in soilless potting compost.

GROWTH RATE

A vigorous yet compact grower, this plant can reach heights of 3¼ft (1m) and spread to 2ft (60cm), but it will grow more slowly in lower light.

CARE

Water when the top compost dries out and feed regularly with liquid houseplant fertilizer in summer. Water in winter to keep compost just moist.

I'll remove toxins

With my broad leaves, I am a top purifying plant. I can help you keep a clean head by extracting high levels of benzene, formaldehyde, trichloroethylene, and ammonia from the atmosphere and giving you plenty of oxygen instead.

Get to know me

My botanical name comes from the Greek *spath*, meaning “spathe,” and *phyl*, which means “leaf,” and references the fact that my spathe looks like a leaf. This is the white bract that protects my true flowers, which look like tiny bumps on my cream-colored, tubular spadix.
