Help me thrive

POSITION

Does well in good but filtered light, especially in spring and summer. Doesn't like temperatures much above 70°F (21°C).

POTTING

Flowers better if roots are growing close together so only repot in spring when the plant becomes root-bound. Use houseplant compost.

GROWTH RATE

Plants divide into 2 groups: rosettes can reach 10in (25cm) tall and 1½ft (50cm) wide; stemmed plants can reach 1¼ft (40cm) tall and 2¼ft (70cm) wide.

CARE

Water plants well from spring to fall, letting the top soil dry out between waterings. Reduce watering in winter to keep the soil just moist.

I'll make you happy

With my colorful trumpetlike blooms, I'll brighten up your day and make you feel happy. I can be found in purple, blue, pink, red, and white, or even in bicolored varieties with contrasting or darker veins, which add more depth to the color of my flowers.
