

If I'm mature, yellow flower sprays appear on branching stems

I am symbolic

My horticultural name is *Chamaedorea*, which means gift from the ground, from the Latin *chamai* meaning "on the ground" and *dorea* meaning "gift." It suits me very well, since I am to symbolize the bounty of nature.

Make sure I'm not too wet

It's better to underwater than overwater me: I am tolerant of some neglect but hate sitting in water. Stick your finger into the top inch of soil; if it's dry, give me a thorough soak and pour away any draining water.

Get to know me

I may look like one plant, but actually I'm a cluster of small plants growing together to create a compact, bushy effect. This means all of us are competing for the nutrients in the pot, so when you repot me, you may wish to divide me to make more plants, but remember that I won't have the same dense impact.
