

Be mindful of me

Please feed me once a month in spring and summer. When I'm thirsty, I prefer rainwater or distilled water because I am sensitive to chlorine damage. I flower best when I am root-bound in my container, so keep me in it for up to four years before repotting. I do get top heavy, so choose a heavy pot to keep me stable.

Get to know me

I am native to South Africa and was first identified in KwaZulu-Natal in the early 1850s. I get my genus name from Lady Florentina Clive, who first cultivated me in the UK, and *miniata* means "bright red"—referring to my vibrant flowers, though they can be found in a variety of colors.

BE AWARE: I can be harmful if eaten, so keep me away from children and pets.
