

I'll remove toxins

I'm very effective at ridding the air of toxins. My leaves can help reduce nausea and confusion by absorbing xylene in the atmosphere, which is caused by paint, thinners, and other home-decorating products.

I'm easy to look after

As long as I get the basics—filtered sunlight, moist soil, and the occasional feed while I'm growing in spring and summer—I don't demand a lot of care. I am a perfect houseplant for beginners, and for little work, I'll reward you with my palm-tree-like presence.

Let's make babies

I am easy to propagate: simply cut my top off just below the leaf line and plant the cutting in some soil or in a vase with fresh water. Then, when the roots grow to 1in (2.5cm), plant it into a houseplant potting mix with good drainage.

BE AWARE: I can be harmful to pets if eaten, so keep me away from cats and dogs.
