

*My pungent,
thistle-like flowers
bloom in winter*

Give me a new lease of life

I lose my vibrancy and turn darker as I mature. Keep me looking good as new by propagating me. Cut a stem at around 2½in (6–10cm) long and place it in water, then replot it once roots have formed.

My flowers are unusual

My flowers are as fascinating as my foliage. They look like thistles and are vivid orange, forming a great contrast to my leaves. Their fragrance, however, is another matter—some people choose to snip off my blooms because they're not too fond of the overpowering scent.
