

SOAP- POWERED BOAT

Get ready to set sail on the soapy seven seas! Make a little boat, float it on some water, and then—using nothing but a dab of dishwashing liquid—send it whizzing across the surface. The soap doesn't really power the boat, but it releases hidden energy in the water. Hoist anchor and set sail!

This cutout area is where the dishwashing liquid goes, acting as a kind of "fuel" for the boat.
