

Leave your bath fizzies in their molds for two days.

Pack the mixture firmly down in the molds.

6 When you've filled all of the molds, press hard on the mixture with your fingers. You can also use fingers or a spoon to spread out the powder evenly. The idea is to pack the molds down firmly and make them as neat as possible.

7 Leave your bath fizzies to dry for at least two days. As they lose water to air they will become harder. They won't dry out completely and fall apart because of the olive oil, which keeps the dry powders locked together.

Peel away the molds gently to avoid breaking the bath fizzies.

8 After a couple of days, gently remove the bath fizzies from their molds. If you are using silicone molds, you can use them again to make another batch—perhaps using a different color.

Don't worry if a bath fizzy looks uneven at the surface—it won't have any effect on how well it works.

When an acid and a base react in water, it's called a **neutralization reaction**.

9 They are ready—but remember to keep them away from places where they might get wet... until it's time for a bath, of course!
