

A hand is shown holding a small blue object. The background is yellow with black line drawings of various slime shapes, including a large, flowing shape at the top and several smaller, more solid-looking shapes scattered around. The title 'STICKY SLIME' is written in a large, bold, black, hand-drawn font.

STICKY SLIME

This sticky substance is easy to make, fun to play with, and behaves very weirdly indeed. Hold it in your hand for just a few seconds and see if you can figure out if it is a solid or a liquid. Not sure? It's no wonder, since this slime will flow through your fingers like a thick liquid, but then, if you squeeze, it will behave like a solid. Believe it or not, gooey mixtures like this are still liquids even when they're behaving like solids. Try not to make too much of a mess!
