

A photograph of a terrarium made from a clear plastic bottle. The bottle is filled with a layer of dark brown soil at the bottom. Above the soil, there is a layer of moss and several small, light-colored, egg-shaped objects. A green plant with long, pointed leaves is growing out of the soil. The bottle is placed on a wooden surface. The background is a solid green color. There are several water droplets on the glass of the bottle. Hand-drawn arrows point from text boxes to specific parts of the terrarium: one to the plant, one to the water droplets on the glass, one to the moss and eggs, and one to the soil.

Your plant needs sunlight, which reaches it through the transparent plastic bottle.

Water collects on the inside of the bottle.

You can add moss and other small plants if you like.

The soil holds water, like a sponge.
