

HOW TO MAKE STICKY SLIME

This experiment can get messy, so put down wax paper to catch any sticky spills. Although there's nothing poisonous in the mixture, don't put the slime in your mouth. If you want slime that is more gloopy, warm water is ideal—but don't use boiling water, which could scald you. It's also a good idea to wash your hands after you've finished playing with the slime, because this keeps the slime from getting all over the furniture!

WHAT YOU NEED

Time
20 minutes

Difficulty
Medium

1 Tape a sheet of wax paper to your work surface. Pour a generous amount of food coloring into the large mixing bowl. Then add the shampoo. Notice how slowly the shampoo flows—the technical term for this gloopy behavior is viscosity.

2 Add the cornstarch to the mixing bowl and stir the contents with the spatula. This is hard at the start because there's a lot of powder and not much liquid. Don't worry: more liquid is going in.
