

3 Now get the shoe box and cut a 2 in (5cm) by 1 in (2.5cm) hole in the center of one end. Cover any other holes in the box with tape to stop unwanted light from getting through.

4 Paint the box inside and out—this will make it look great when you put it on display. White paint makes a good undercoat, with dark green on top, but you can paint it whatever color you like.

5 Cut two pieces of card stock to fit inside the box. Make them wide enough so you can create flaps on both sides. Near the end of each piece of card stock, cut out a rectangular hole.

6 Use tape to attach the flaps of the card stock to the inside of the box. Position one piece of card stock about one-third of the way down the box, and the other about two-thirds down. Make sure the two holes are at opposite sides.

Once a shoot appears, the plant will depend on light to grow.

The card stock makes the maze that your bean seedling will have to find its way through.

7 Meanwhile, check for a green shoot in your cup. Spray on more water if it's too dry. You can start your experiment once the seed has grown, or germinated, which may take a few days.
