

BALLOON ROCKET CAR

Make a car that speeds along with a few puffs of air. It works in the same way as a jet airplane or space rocket, as a stream of fast-moving air escapes from a balloon and shoots out from the back of the car, pushing it forward. Blow up a balloon and see how far and fast your car can go. Vrrrooom!

Think about what shape will make your car faster, so it can slice through the air.
