

HOW TO MAKE A BALLOON ROCKET CAR

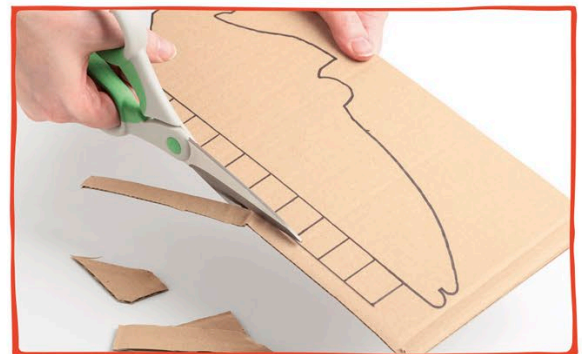

Because the car's body is made of cardboard you'll need to be careful when cutting it out, so it doesn't bend or crease. Of course, you can make whatever shape you want—the following instructions show just one design. But remember, while you are painting your car put down newspaper or find a place where it doesn't matter if you spill paint!

WHAT YOU NEED

1 On the larger piece of cardboard, draw the shape of your car. Leave space below the car body for a row of rectangles, each about $\frac{3}{4}$ in (2 cm) wide. For neatness, you can use a ruler. This row will make the tabs for sticking on to the base of the car.

2 Use the scissors to cut around the whole shape. You can cut the lines between the tabs now or wait until step 11, after you paint the car. If you wait, be careful not to paint over the tab lines. Later, they are going to be folded and attached to the base.
