

You may want to use a ruler to make sure you keep the lines of your base straight.

3 Now it's time to make the base of the car. Draw and cut out a rectangle, making the longer sides the same length as the total length of the tabs you drew in step 1. The base needs to be only about 1¼in (3cm) wide.

4 Your car's wheels are made from the bottle tops. Push the sharp end of a skewer through the center of each one. A lump of modeling clay will protect your fingers or the work surface. If you have difficulty, ask an adult to help you.

You may need to use more than one coat of paint to get the shade you want.

5 Paint the individual pieces before you assemble the car. Choose whatever colors you like, but if you want to create a realistic look, paint both sides of the car body. Put down some newspaper so you don't make a mess!

Only the top side of the car's base needs painting.

You can paint the wheels, too.
