

4 To finish the first side of the bridge, glue three popsicle sticks across the tops of the four triangles, from the top corner of one to the top corner of the next.

5 Repeat steps 1 to 4 to make the two sides of your bridge. Then leave them somewhere safe while the glue sets.

7 Glue three sticks in a line, and stick it to one corner of the square. Glue another line of three sticks to the other corner. Keep the lines parallel.

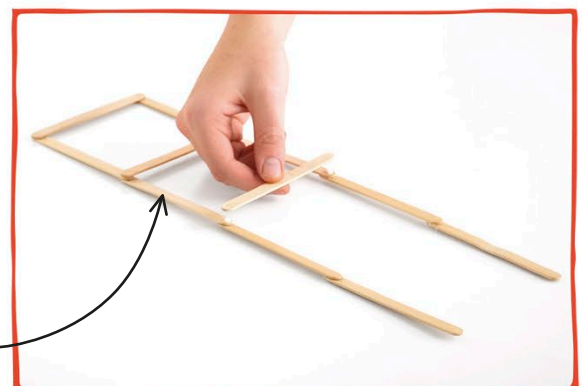

Glue the ends of the stick onto the ends of the two sticks in the line.

Handle the sticks with care—you don't want to bend them.

You only need a small dab of glue.

It is important to line up the sticks before you glue them together.

6 To make the bottom of the bridge, glue the ends of four popsicle sticks together, forming a square. Leave them for a minute so the glue can set.

8 Make another square by gluing the ends of a stick to the joins of matching sticks in each line. Repeat with two more sticks, making four squares.
