

It could almost be alive! The balloon gives the snake's head a charge of static electricity and makes it rear up.

HEADS UP

When you put your tissue snake on a table or in the bottom of a basket, its head will normally lie flat. Even light material like this is pulled down by the force of gravity. To lift it up, there must be another force acting on it—one that pulls the snake's head upward, against gravity. That is the force of attraction between electric charges.

For a real snake-charmer effect, you can put your snake in a basket.
