

## TAKE IT FURTHER

You can explore the forces of static electricity in many ways—here are just a few fun ways, using objects you can find around the home. Charge the balloons by rubbing on hair or wool, as before.

### BENDING WATER

The invisible forces of static electricity can do surprising things that seem like magic! See for yourself how static electricity can bend water before your very eyes.

**1** Turn on a faucet to produce a slow but steady stream of water. Bring an uncharged balloon close to the running water. What happens? Nothing!

The closer the balloon, the stronger the force of attraction.

**2** Now charge up the balloon and bring it close to the stream of water. This time the water bends, attracted by the forces of static electricity.

### JUMPING PAPER PEOPLE

Make the people dance! You can use a charged balloon to attract small pieces of paper on a table. See how close you have to hold the balloon before the paper jumps up and down.

**1** Cut out lots of small pieces of paper. The round "confetti" made by a hole punch works well, or you could make fun shapes like these. Lay them on a table.

**2** Bring a charged balloon close to the paper pieces. The pieces will jump up and stick to the balloon. Some will even fall off and jump up again.
