

THE ATLANTIC OCEAN

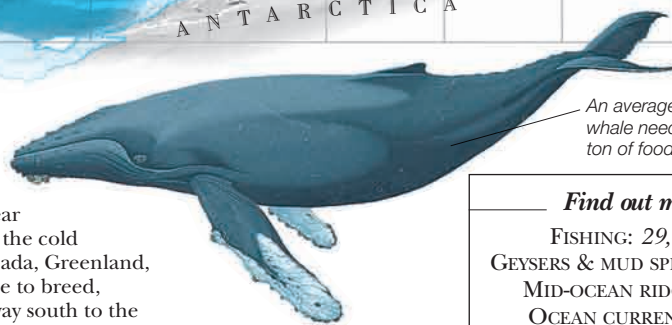

TURTLE TURNAROUND

Green turtles live off the coast of Brazil, but make their way across the South Atlantic to Ascension Island to lay their eggs. Once the young turtles have hatched, they return to Brazil – a round trip of 1,740 miles (2,800 km).

WHALE MIGRATION

Humpback whales can be found in all the world's seas. Many spend a large part of the year feeding on krill and fish in the cold waters off the coasts of Canada, Greenland, and Iceland. When it is time to breed, however, they make their way south to the tropical waters of the Caribbean Sea.

An average humpback whale needs about a ton of food per day.
