

How you move

This part of your brain tells your muscles to work.

What you feel

You use this area of your brain when you touch something.

Understanding words

When someone speaks to you, this part of your brain figures out what the words mean.

What you see

Your eyes send messages to this part of your brain, so you know what you are seeing.

How you breathe...

Your brain stem controls your breathing and how fast your heart beats.

Nerve cells

The brain is made up of billions of nerve cells, called neurons. They send signals to each other, like electricity traveling through wires.
