

The world's
longest ever
sneezing fit lasted
978 days!

Sneezing uses muscles in your belly, chest, nose, and throat.

Ha-choo!

The droplets you sneeze out are called mucus. If you have a cold and other people breathe in your mucus, they can catch your cold.

Quick quiz

Name two things that make you sneeze.

What are the hairs in your nose for?

What does mucus contain?

Inside the droplets....

Each droplet can contain many different things, including living things. This picture magnifies them thousands of times.
