

Every year,
the Moon
moves $1\frac{1}{2}$ in
(4 cm) farther
away from
the Earth.

• Solid iron

The Moon's
inner core is
a massive ball
of hot, solid iron.

• Liquid iron

The outer core
surrounds the
inner core. It is
made from hot,
liquid iron.

• Melting mantle

The inner
mantle is
partly melted,
so some of it is
solid and some
of it is liquid.

Quick quiz

How old is
the Moon?

How many people
have landed on
the Moon?

Is the center of the
Moon liquid or solid?
