

Is there life on Mars?

No life has been found on Mars. However, life might have existed long ago if the conditions were right. A robot called Curiosity has been sent to study the planet to find out if it was warmer and wetter in the past.

...Sending signals

There are three antennae on Curiosity. Scientists on Earth use them to communicate with the robot.

Curiosity's top speed is **260 feet per hour** (80 meters per hour)—that's the speed of a tortoise!
