

A detailed illustration of the Curiosity rover on the surface of Mars. The rover is shown from a side-on perspective, highlighting its six large, treaded wheels and its complex robotic arm. The background features the reddish-brown, hilly terrain of Mars under a hazy sky. A dotted line with an arrow points from the 'Taking pictures' text to the rover's camera masthead.

Taking pictures

Curiosity has 17 cameras, which allow scientists on Earth to see whatever it can see. It also has a laser that can turn rocks to dust to find out what they are made of.

Curiosity took more than 8 months to reach Mars.

Working hard

Curiosity's robotic hand has lots of tools. Here it is using a tool to scrape away the surface rock.

A close-up illustration of one of the rover's six large, treaded wheels, showing its rugged design and the texture of the Martian soil.

On the move

The rover has six tough wheels that help it travel across the bumpy surface.

Quick quiz

Have we discovered life on Mars?

How are Curiosity's antennae used?

How many cameras does Curiosity have?
