

.....Rocky crust

The Earth's rocky outer surface is called the crust. It forms the ocean floor under the sea and the continents, where we live.

.....Molten mantle

The mantle is a thick layer of hot rock. This rock is so hot that some of it melts and forms a liquid called magma. Magma moves around in the mantle very slowly.

.....Liquid outer core

The outer core is a hot, liquid mixture of two metals called iron and nickel, and a mineral called sulfur.

.....Solid middle

The Earth's inner core is a hot, solid mixture of iron and nickel.

The temperature of the Earth's inner core is **10,800°F** (6,000°C).

Quick quiz

Where is the Earth's atmosphere?

What do we call the Earth's outer layer?

Which layer is made of hot, solid metal?
