

More than 1 million earthquakes happen every year. Most are so small that people do not even notice them!

.. Pacific quake

In 2011, a huge earthquake took place in Japan. It began in the Pacific Ocean, where one plate moved beneath another.

.... Making mountains

The Himalayan mountains were formed when two plates pushed together, making the ground rise up in huge peaks. These plates are still moving against each other, which often causes earthquakes in this region.

.. Giant waves

In 2004, an earthquake under the Indian Ocean caused a tsunami—an enormous wave. The waves washed ashore and caused destruction in 14 different countries.

Quick quiz

What causes earthquakes?

How are earthquakes measured?

How many earthquakes happen each year?
