

There are
around **289,000**
different kinds
of plant living
in the world.

.....Plants

Nearly all plants stay in one place, rooted to the same spot. Most plants use sunlight, water, air, and their green leaves to make their own food.

.....Animals

All animals eat other living things for energy. Whether they run, crawl, swim, or fly, most animals must move around to find the food they need to survive.

Quick quiz

How many cells are bacteria made up of?

What do most plants use to make food?

What do animals eat for energy?
