

Invertebrates

Invertebrates are animals that have no backbone.

They make up 97 percent of all animal species.

Fishes

Fishes live in water and breathe using gills. Most fishes have scales and use fins for swimming.

Amphibians

Amphibians can live both on land and in water. Most return to water to lay eggs.

Reptiles

Reptiles have dry skin that is covered with waterproof scales or horny plates. Most produce young by laying eggs.

Around 14,500 new animal species were discovered in just one year (2011).

Quick quiz

- ★ Which animals feed their young on milk?
- ★ What features do birds have?
- ★ Where do amphibians live?
