

Leading lion

The male lion is head of his family group, which is called a pride. He lets the lioness hunt for food but is always first to eat.

Wildebeest

Vulture

Umbrella trees :

They may be shaped like umbrellas, but acacia trees can live for months without rain.

Cheetah

Do lions live in the jungle?

Lions don't live in the wet and steamy jungle (also known as a rain forest). They prefer the dry, open grasslands of Africa, which are called savannas. The savanna gets enough rain for shrubs and some trees to grow, and it is home to many different kinds of animal.

A lion's roar can be heard up to **5 miles (8 km)** away.
