

When did people build the first houses?

Early humans were hunters who moved around to find food, so they lived in temporary shelters. Around 12,000 years ago, when people learned how to farm, they settled in one place and started to build permanent houses. Over time, these groups of houses became towns like this one, which existed 9,000 years ago.

Drying out

Animal skins were cleaned and dried and used for clothing.

Animal skin

Rooftop life

People used roofs as spaces to do their work. There were no streets in the cramped town, so that it would be hard for attackers to enter.

Quick quiz

How old is the town shown here?

What did farm animals provide?

Why did people weave cloth?

Farm animals

Cattle, sheep, donkeys, and goats were kept in pens between the houses. They provided people with food, wool, and transportation.

Roof made of reeds

Ox
