

The biggest stars are called supergiants.

2 Solar system

1 Center of galaxy

5 Dust clouds

4 Spiral arm

★ 2 Solar system

Our solar system contains eight planets, around 170 moons, and millions of asteroids and comets. They all orbit (travel around) the star we call the Sun.

★ 3 Gas clouds

Our galaxy contains huge clouds of gas. Stars form in the gas clouds, lighting them up.

The oldest known star is thought to be 13.2 billion years old.

★ 5 Dust clouds

The dark areas between the spiral arms are clouds of dust. These are called nebulae.

★ 4 Spiral arm

Our galaxy is a spiral shape with four major "arms." Stars, gas, and dust are found in these arms.

Quick quiz

- ★ What is the name of our galaxy?
- ★ What is in the center of the galaxy?
- ★ What is the age of the oldest known star?
