

Tree types

All trees fit into one of three categories, which are based on the shape of their leaves. They are broadleaved, needle-leaved, and palm.

Broadleaved trees have a variety of leaf shapes. Oak leaves are lobed, which means they have rounded points.

Out for the summer

Broadleaved trees have flat, broad leaves. Most trees of this kind are deciduous. This means their leaves die in the winter and fall off.

Bark is the dead cells of the tree trunk.

Growth rings

A tree grows by adding a layer of cells around its trunk. One layer is added every year. You can tell how old a tree was by counting the number of growth rings inside the trunk.
