

Champion climber

Stem climbers, such as morning glory, can climb over anything. They are able to wrap their stems around larger objects than tendrils or leaf stalks can, including tree trunks.

Climbing facts

- Honeysuckle, a stem climber, can kill trees by wrapping too tightly around the trunk.
- Climbing roses aren't actually climbers, they just lean on their supports and hang on using their thorns.

can stretch a long way.

Getting a grip

These strange-looking fingers growing from ivy stems are roots. They are slightly sticky and can grip almost any surface. It is easy for ivy to cover whole houses, worming its roots into the bricks.
